

## Facts about Taylor Polynomials and Error Bounds

$$T_1(x) = \sum_{k=0}^1 \frac{f^{(k)}(b)}{k!} (x-b)^k = f(b) + f'(b)(x-b).$$

$$T_2(x) = \sum_{k=0}^2 \frac{f^{(k)}(b)}{k!} (x-b)^k = f(b) + f'(b)(x-b) + \frac{f''(b)}{2!} (x-b)^2.$$

$$T_3(x) = \sum_{k=0}^3 \frac{f^{(k)}(b)}{k!} (x-b)^k = f(b) + f'(b)(x-b) + \frac{f''(b)}{2!} (x-b)^2 + \frac{f'''(b)}{3!} (x-b)^3.$$

$$T_n(x) = \sum_{k=0}^n \frac{f^{(k)}(b)}{k!} (x-b)^k = f(b) + f'(b)(x-b) + \frac{f''(b)}{2!} (x-b)^2 + \cdots + \frac{f^{(n)}(b)}{n!} (x-b)^n.$$

Taylor inequalities

$$\text{ERROR} = |f(x) - T_1(x)| \leq \frac{M}{2!} |x-b|^2 \quad , \text{ where } |f''(x)| \leq M \text{ on the interval, and in general,}$$

$$\text{ERROR} = |f(x) - T_n(x)| \leq \frac{M}{(n+1)!} |x-b|^{n+1} \quad , \text{ where } |f^{(n+1)}(x)| \leq M \text{ on the interval.}$$

*Three types of error questions:*

**Given an interval  $[b-a, b+a]$ , find the  $T_n(x)$  error bound:**

1. Find  $|f^{(n+1)}(x)|$ .
2. Determine a bound (a *tight* bound if possible) for  $|f^{(n+1)}(x)| \leq M$  on the interval.
3. In Taylor's inequality  $\frac{M}{(n+1)!} |x-b|^{n+1}$  replace  $M$  and replace  $x$  by an endpoint.

**Find an interval so that  $T_n(x)$  has a desired error:**

1. Write  $[b-a, b+a]$  and you will solve for  $a$ .
2. Find  $|f^{(n+1)}(x)|$ .
3. Determine a bound (a *tight* bound if possible) for  $|f^{(n+1)}(x)| \leq M$  on the interval, this will involve the symbol  $a$ .
4. In Taylor's inequality  $\frac{M}{(n+1)!} |x-b|^{n+1}$  replace  $M$  and replace  $x$  by an endpoint (this will involve the symbol  $a$ ).'
5. Then solve for  $a$  to get the desired error.

**Given an interval  $[b-a, b+a]$ , find  $n$  so that  $T_n(x)$  gives a desired error:**

(There is no good general way to solve for the answer in this case, you just use trial and error).

1. Find the error for  $n = 1$ , then  $n = 2$ , then  $n = 3$ , etc. Once you get an error less than the desired error, you stop.
2. If you spot a pattern in the errors, then use the pattern to solve for the first time the error will be less than the desired error.

## Facts about Taylor Series

$$e^x = \sum_{k=0}^{\infty} \frac{1}{k!} x^k = 1 + x + \frac{1}{2!}x^2 + \frac{1}{3!}x^3 + \dots, \text{ for all } x.$$

$$\sin(x) = \sum_{k=0}^{\infty} \frac{(-1)^k}{(2k+1)!} x^{2k+1} = x - \frac{1}{3!}x^3 + \frac{1}{5!}x^5 + \dots, \text{ for all } x.$$

$$\cos(x) = \sum_{k=0}^{\infty} \frac{(-1)^k}{(2k)!} x^{2k} = 1 - \frac{1}{2!}x^2 + \frac{1}{4!}x^4 + \dots, \text{ for all } x.$$

$$\frac{1}{1-x} = \sum_{k=0}^{\infty} x^k = 1 + x + x^2 + x^3 + \dots, \text{ for } -1 < x < 1.$$

Substituting into series (examples):

$$e^{2x^3} = \sum_{k=0}^{\infty} \frac{1}{k!} 2^k x^{3k} = 1 + 2x^3 + \frac{2^2}{2!}x^6 + \frac{2^3}{3!}x^9 + \dots, \text{ for all } x.$$

$$\sin(5x) = \sum_{k=0}^{\infty} \frac{(-1)^k}{(2k+1)!} 5^{2k+1} x^{2k+1} = 5x - \frac{5^3}{3!}x^3 + \frac{5^5}{5!}x^5 + \dots, \text{ for all } x.$$

$$\cos(x^2) = \sum_{k=0}^{\infty} \frac{(-1)^k}{(2k)!} x^{4k} = 1 - \frac{1}{2!}x^4 + \frac{1}{4!}x^8 + \dots, \text{ for all } x.$$

$$\frac{1}{1+3x} = \sum_{k=0}^{\infty} (-3)^k x^k = 1 - 3x + 3^2x^2 - 3^3x^3 + \dots, \text{ for } -1 < -3x < 1.$$

Multiplying out (examples):

$$x^3 e^x = \sum_{k=0}^{\infty} \frac{1}{k!} x^{k+3} = x^3 + x^4 + \frac{1}{2!}x^5 + \frac{1}{3!}x^6 + \dots, \text{ for all } x.$$

$$\frac{x^2}{1+2x} = \sum_{k=0}^{\infty} (-2)^k x^{k+2} = x^2 - 2x^3 + 2^2x^4 - 2^3x^5 + \dots, \text{ for } -1 < 2x < 1.$$

Integrating/Differentiating (examples):

$$-\ln(1-x) = \int_0^x \frac{1}{1-t} dt = \sum_{k=0}^{\infty} \frac{1}{k+1} x^{k+1} = x + \frac{1}{2}x^2 + \frac{1}{3}x^3 + \dots, \text{ for } -1 < x < 1.$$

$$\tan^{-1}(x) = \int_0^x \frac{1}{1+t^2} dt = \sum_{k=0}^{\infty} \frac{(-1)^k}{2k+1} x^{2k+1} = x - \frac{1}{3}x^3 + \frac{1}{5}x^5 - \dots, \text{ for } -1 < x < 1.$$

$$\int e^{x^3} dx = C + \sum_{k=0}^{\infty} \frac{1}{k!} \frac{1}{3k+1} x^{3k+1} = C + x + \frac{1}{2!(4)}x^4 + \frac{1}{3!(7)}x^7 + \dots, \text{ for all } x.$$

$$\frac{1}{(1-x)^2} = \frac{d}{dx} \left( \frac{1}{1-x} \right) = \sum_{k=0}^{\infty} kx^{k-1} = 1 + 2x + 3x^2 + 4x^3 + \dots, \text{ for } -1 < x < 1$$
