## MATH 250 HANDOUT 1 - LOGIC

A statement is a sentence for which 'true or false' is meaningful.

## 1. Which of these are **statements**?

- (1) Today it is raining.
- (2) What is your name?
- (3) Every student in this class is a math major.
- (4) 2+2=5.
- (5) x + 1 > 0.
- (6)  $x^2 + 1 > 0.$
- (7) If it is raining, then I will wear my raincoat.
- (8) Give me that.
- (9) This sentence is false.
- (10) If x is a real number, then  $x^2 > 0$ .

2. Which of these are true?

- (1) (T or F) Every student in this class is a math major and a human being.
- (2) (T or F) Every student in this class is a math major or a human being.
- (3) (T or F) 2 + 2 = 5 or 1 > 0.
- (4) (T or F) If x is a real number, then  $x^2 \ge 0$ .
- (5) (T or F) If x is a complex number, then  $x^2 \ge 0$ .

3. Write the negations of the following.

- (1) 2+2=5
- (2) 1 > 0.
- (3) 2+2=5 or 1>0.
- (4) Every student in this class is a math major.
- (5) Every student in this class is a math major or a human being.
- (6) If x is a real number, then  $x^2 > 0$ .

4. Prove the following using truth tables.

(1)  $P \land (Q \lor R) = (P \land Q) \lor (P \land R)$ , (2)  $(P \lor Q) \lor R = P \lor (Q \lor R)$ . (We thus write  $P \lor Q \lor R$  for both.) (3)  $\neg (P \lor Q) = \neg P \land \neg Q$ , (4)  $\neg (P \land Q) =$ (make a guess similar to problem 3), (5)  $\neg (\neg P) = P$ . 5. In exercise 6, you may use the following variants of exercise 4.

(1)  $P \lor (Q \land R) = (P \lor Q) \land (P \lor R),$ (2)  $(P \land Q) \land R = P \land (Q \land R).$  (We thus write  $P \land Q \land R$  for both.) (3)  $P \lor Q = Q \lor P.$ (4)  $P \land Q = Q \land P.$ 

6. Prove or disprove the following *without* using truth tables.

 $\begin{array}{l} (1) \ \neg (P \land \neg Q) = \neg P \lor Q. \\ (2) \ P \lor ((Q \land R) \land S) = (P \land Q) \lor (P \land R) \lor (P \land S). \\ (3) \ P \lor (Q \land R) \land S) = (P \lor Q) \land (P \lor R) \land (P \lor S). \end{array}$ 

7. Write the negations of the following implications.

- (1) If n is even, then  $n^2$  is even.
- (2) If 1 = 0, then 2 + 2 = 5.
- (3) If there is free coffee, then DZB will drink it
- (4) If 1 = 0 and 2 + 2 = 5, then the sky is blue and kittens are popular on youtube
- (5) If x and y are real numbers such that xy = 0, then x = 0 or y = 0.

8. Which of these are true?

- (1) (T or F) For all  $x \in \mathbb{Z}$ , x is divisible by 2.
- (2) (T or F) There exists an  $x \in \mathbb{Z}$  such that x is divisible by 2.
- (3) (T or F) For all  $x \in \mathbf{R}$ , if  $x \neq 0$ , then there exists a  $y \in \mathbf{R}$  such that xy = 1.
- (4) (T or F) For all  $x \in \mathbf{R}$ , there exists a  $y \in \mathbf{R}$  such that xy = 1.

9. Write the negations of the following.

(1) For all  $x \in \mathbf{Z}$ , x is divisible by 2. (2) There exists an  $x \in \mathbf{Z}$  such that x is divisible by 2. (3)  $\neg(\forall x, P(x))$ , (4)  $\neg(\exists x \text{ s.t. } Q(x))$ (5)  $\forall x, (P(x) \land Q(x))$ . (6) If  $\exists x \in \mathbf{R}$  such that 2x = 1, then for all  $y, y^2 < 0$ . (7) For all  $x \in \mathbf{R}$ , there exists a  $y \in \mathbf{R}$  such that xy = 1.

10. Write the converse and contrapositive of the statements from problem 7.

Here are some basic identities.

(1)  $P \land Q = Q \land P$ (2)  $P \lor Q = Q \lor P$ (3)  $(P \land Q) \land R = P \land (Q \land R) = P \land Q \land R$ (4)  $(P \lor Q) \lor R = P \lor (Q \lor R) = P \lor Q \lor R$ 

Here are some useful identities.

(1) 
$$\neg (P \land Q) = \neg P \lor \neg Q$$
  
(2)  $\neg (P \lor Q) = \neg P \land \neg Q$   
(3)  $\neg (\neg P) = P$   
(4)  $P \lor (Q \land R) = (P \lor Q) \land (P \lor R)$   
(5)  $P \land (Q \lor R) = (P \land Q) \lor (P \land R)$   
(6)  $\neg (P \Rightarrow Q) = P \land \neg Q$   
(7)  $\neg (\forall x, P(x)) = \exists x \text{ such that } \neg P(x)$   
(8)  $\neg (\exists x \text{ such that } P(x)) = \forall x, \neg P(x)$ 

We can combine these to negate more complicated statements

(1) 
$$\neg (P \Rightarrow (Q \lor R)) =$$
  
 $P \land \neg (Q \lor R)) =$   
 $P \land \neg Q \land \neg R$ 

(2) If 1 = 0 and 2 + 2 = 5, then the sky is blue and kittens are cute If (P and Q) then (R and T)

Its negation: (P and Q) and not (R and T) (1 = 0 and 2 + 2 = 5) and (the sky is not blue or kittens are not cute)

 $\begin{array}{l} (3) \ \neg Q \Rightarrow \neg P \\ \neg (\neg Q \Rightarrow \neg P) \\ \neg Q \land \neg (\neg P) \\ \neg Q \land P \end{array}$ 

This last example is called the **contrapositive**, and is a useful proof technique! (Try it on your homework.)

 $(P \Rightarrow Q) = (\neg Q \Rightarrow \neg P)$  because they have the same negation.
