## MATH 250 HANDOUT 12 - COMPOSITIONS AND INJECTIVITY/SURJECTIVITY

- (1) Let  $f: \mathbf{R} \to \mathbf{R}$  be the function  $f(x) = \frac{1}{1+x^2}$  and let  $g: \mathbf{R} \to \mathbf{R}$  be the function  $g(x) = e^x$ .
  - (a) What is  $g \circ f(0)$ ?
  - (b) What is  $f \circ g(0)$ ?
  - (c) Give a formula for  $f \circ g$  and  $g \circ f$ .

- (2) Let  $f: \mathbf{R} \to \mathbf{Z}$  be the function  $f(x) = \lfloor x \rfloor$  (i.e., round x down to the nearest integer) and let  $g: \mathbf{Z} \to \mathbf{Z}$  be the function g(n) = 'the number of distinct prime factors of n'. (So g(0) = g(1) = 0, g(4) = 1, g(6) = 2))
  - (a) What is  $g \circ f(\pi)$ ?
  - (b) What is  $g \circ f(91.1023124)$ ?
  - (c) Is  $g \circ f$  injective? Surjective?

- (3) Let  $f: \mathbf{Z} \to P(\mathbf{Z})$  be the function  $f(n) = \{n\}$  and let  $g: P(\mathbf{Z}) \to P(\mathbf{Z})$  be the function  $g(S) = S \cap \{1\}.$ 
  - (a) What is  $g \circ f(0)$ ?
  - (b) What is  $g \circ f(1)$ ?
  - (c) Give a formula for  $g \circ f$ .

- (4) Let f: A → B and g: B → C be functions. Prove or disprove each of the following:
  (a) If f and g are injections, then g ∘ f is an injection.
  - (b) If f and g are surjections, then  $g \circ f$  is a surjection.
  - (c) If f and g are bijections, then  $g \circ f$  is a bijection.
  - (d) If  $g \circ f$  is an injection, then f and g are injections.
  - (e) If  $g \circ f$  is a surjection, then f and g are surjections.
  - (f) If  $g \circ f$  is a bijection, then f and g are bijections.
  - (g) If  $g \circ f$  is an injection, then f is an injection.
  - (h) (HW) If  $g \circ f$  is an injection, then g is an injection.
  - (i) (HW) If  $g \circ f$  is a surjection, then f is a surjection.
  - (j) (HW) If  $g \circ f$  is a surjection, then g is a surjection.
  - (k) If  $g \circ f$  is a bijection, then f is a bijection.
  - (l) If  $g \circ f$  is a bijection, then g is a bijection.
  - (m) If  $g \circ f$  is an injection and g is a bijection, then f is an injection.
- (5) Let  $f: A \to B$  be a function. Let  $X, Y \subset A$  and let  $W, V \subseteq B$ . Each of the following statements are false as stated. Which become true if we assume that f is injective or surjective? In each case (f is injective, or f is surjective), prove your assertion or give a counterexample.
  - (a)  $X \subseteq Y \Leftarrow f(X) \subseteq f(Y)$ .
  - (b)  $(HW)f(X \cap Y) \subseteq f(X) \cap f(Y)$ .
  - (c)  $f(X) f(Y) \subseteq f(X Y)$ .
  - (d)  $X \subseteq f^{-1}(f(X))$ .
  - (e)  $W \subseteq f(f^{-1}(W)).$
  - (f)  $V \subseteq W \Leftarrow f^{-1}(V) \subseteq f^{-1}(W).$
